Survey Method

The study was conducted online in 12 countries worldwide (USA, UK, Australia, Brazil, the Czech Republic, France, Germany, Hong Kong, Italy, Japan, Mexico and New Zealand) by Dynata on behalf of Gen from December 5th to December 31st among 12,024 adults ages 18 and older. Data are weighted where necessary by age, gender, and region, to be nationally representative.

Online Dating

Consumers are turning to AI tools and apps to enhance their online dating experience. However, with over half of online daters encountering suspicious profiles at least weekly and scammers leveraging AI to create convincing fakes, navigating the digital dating world is becoming increasingly challenging.

Nearly Half of All Consumers Have Used an Online Dating App or Service

One in Four Online Daters Report They Have Been Targeted by a Dating Scam

“As AI becomes more ingrained in how people interact and present themselves online, it’s critical to recognize both its benefits and the ways it can be manipulated by bad actors. This rise in scams underscores the need for caution. Common red flags include people who avoid video or phone calls, profiles with inconsistencies between their bio and messages or attempts to rush emotional connection or push for personal details too quickly.”

Leyla Bilge, Director of Scam Research.

Write a pick-up line/conversation starter for dating apps

Use AI to develop your dating profile

Use AI apps or tools for dating coaching

Used an AI tool to enhance your photo (e.g. AI tool of Photoshop, Canva, etc.)

Used AI to practice flirting

Write a break-up text for you

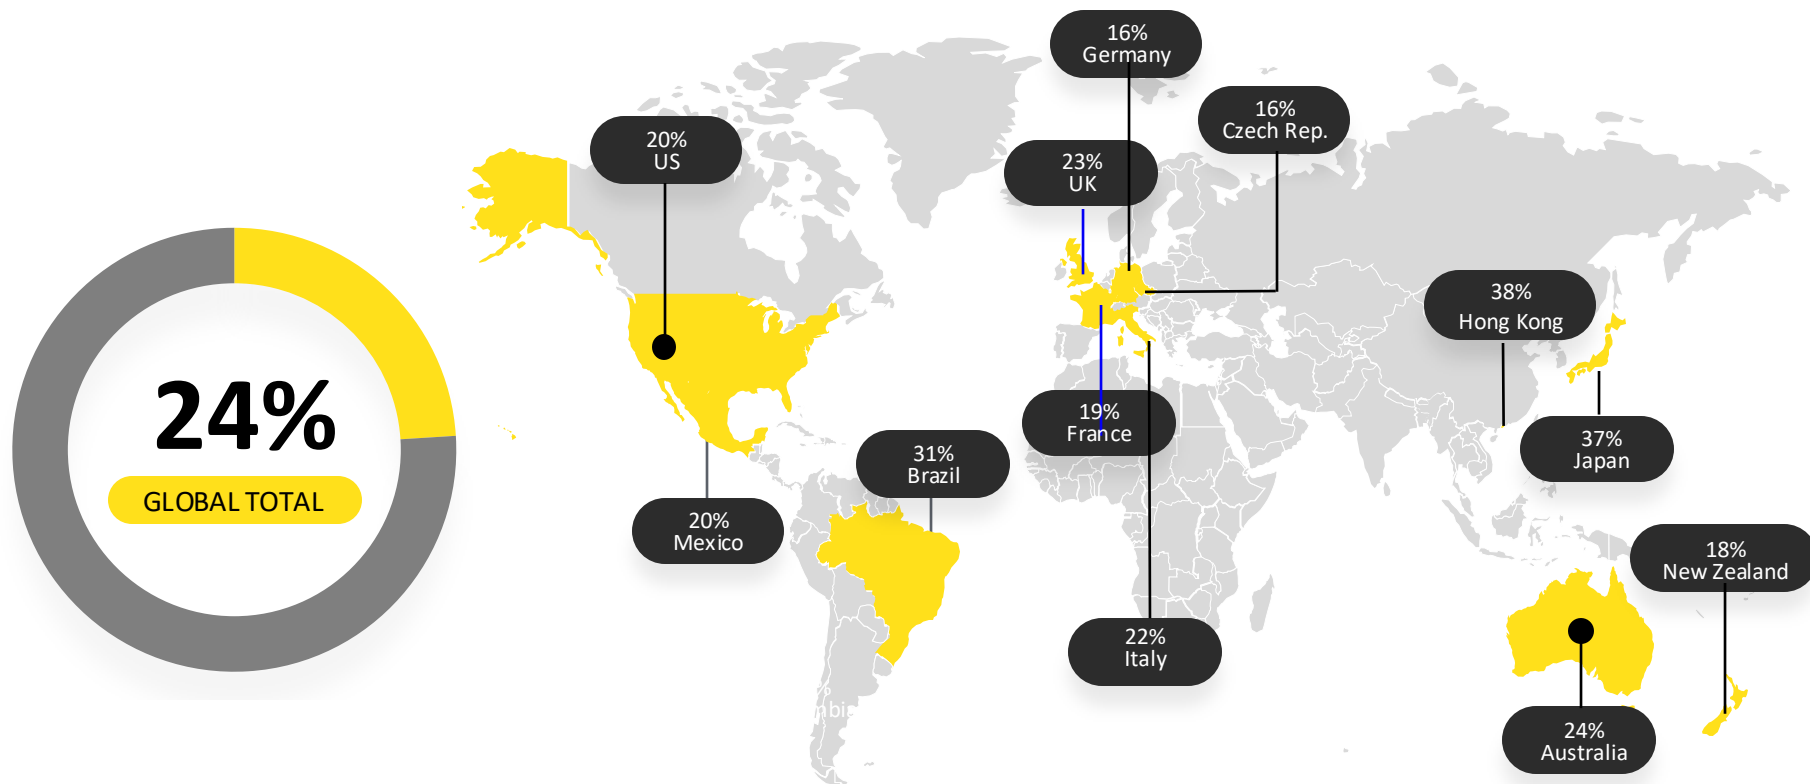

Paid for premium AI accounts to improve your dating prospects

% Very/Somewhat Likely

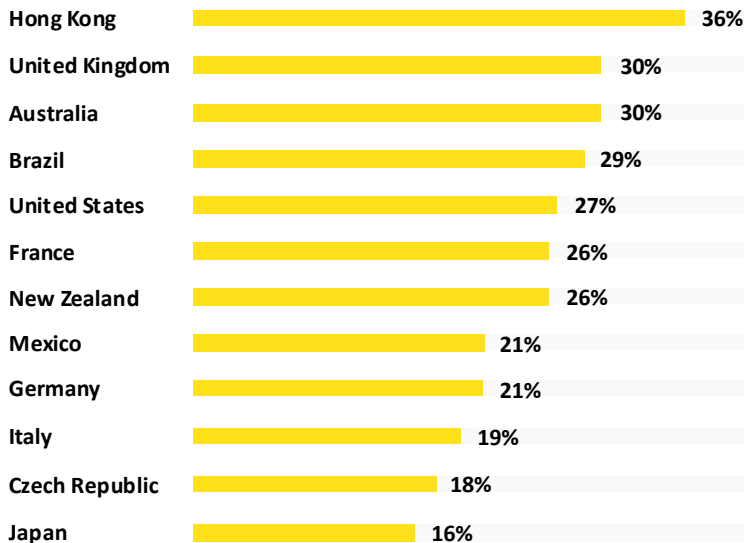

24% of Consumers Admit Loneliness Leads Them to Make Risky Decisions When Online Dating

Respondents Say Social Media & Dating Sites Contribute to Loneliness

Social Media Apps Contribute to Loneliness

Dating Apps Contribute to Loneliness

Tips to Avoid Online Dating Scams

1. **Ask for a recent photo** to help verify the identity of the person that you're talking to. If they protest or make excuses, it is best to err on the side of caution. If an image looks like a stock image or picture of a model, you can use a reverse image search tool to see if the image has been taken from someone else.
2. **If they continually put off meeting in real life** and you've been chatting for a while, this could be a red flag.
3. **Don't visit links sent to you by people you haven't talked to for very long.** Scammers will pose as a member and try to get their target to click on links, usually leading to explicit content or webcam sites, and sometimes can even lead to malicious sites that download malware onto your devices. Norton Genie, a free AI-powered scam detection app, can help detect any malicious links in messages that scammers send.
4. **If someone requests a webcam chat, be especially careful about your behavior.** The criminal can record the webcam session and they can use it to blackmail you. If the conversation you're having starts to take an uncomfortable turn, disconnect the chat.
5. **If you notice the conversation you're having seems a bit off, or the person isn't answering your questions directly, chances are it's a bot.** Scammers create fake profiles that are run by programs called bots. Their objective is to get you to click on a link that will lead to either explicit websites, malware or scam you out of credit card information. It's actually quite easy to spot a bot, as they have a set of predetermined "canned" responses.
